

What is claimed is:

1. A surface-treating agent comprising  
a polyhydric alcohol fatty acid ester,  
5 a non-ether-series hydrophilic polymer excluding  
a polyvinyl alcohol,  
an ether-series hydrophilic polymer having at  
least an oxyethylene unit, and  
a silicone oil.
- 10 2. A surface-treating agent according to claim 1,  
wherein the polyhydric alcohol fatty acid ester comprises  
at least one member selected from the group consisting of  
a sucrose fatty acid ester and a polyglycerin fatty acid  
ester.
- 15 3. A surface-treating agent according to claim 1,  
wherein the non-ether-series hydrophilic polymer  
comprises at least one member selected from the group  
consisting of a polysaccharide, an acrylic polymer or a  
salt thereof, and a homo- or copolymer of vinylpyrrolidone.
- 20 4. A surface-treating agent according to claim 1,  
wherein the ether-series hydrophilic polymer comprises at  
least one member selected from the group consisting of a  
polyoxyethylene-polyoxypropylene block copolymer, and a  
nonionic surfactant having an oxyethylene unit.
- 25 5. A surface-treating agent according to claim 1,  
wherein the silicone oil is in the form of a silicone  
emulsion.

6. A surface-treating agent according to claim 1,  
wherein the proportions of the non-ether-series  
hydrophilic polymer, the ether-series hydrophilic polymer,  
and the silicone oil are 1 to 50 parts by weight, 5 to 150  
5 parts by weight, and 1 to 50 parts by weight, respectively,  
relative to 100 parts by weight of the polyhydric alcohol  
fatty acid ester.

7. A surface-treating agent according to claim 1  
which comprises  
10 at least one fatty acid ester selected from the  
group consisting of a sucrose fatty acid ester, and a  
polyglycerin fatty acid ester,  
a polyvinylpyrrolidone,  
a polyoxyethylene-polyoxypropylene block  
15 copolymer, and  
a silicone emulsion,  
wherein the proportions of the  
polyvinylpyrrolidone, the polyoxyethylene-  
polyoxypropylene block copolymer, and the silicone  
20 emulsion as a solid content are 5 to 25 parts by weight,  
20 to 100 parts by weight, and 5 to 25 parts by weight,  
respectively, relative to 100 parts by weight of the fatty  
acid ester.

8. A coated resin sheet comprising a resin sheet  
25 and a coating layer formed on at least one side of the resin  
sheet, wherein the coating layer comprises a surface-  
treating agent recited in claim 1.

9. A coated resin sheet according to claim 8, wherein the coating layer is formed on one side of the resin sheet, and a release layer is formed on the other side of the resin sheet.

5           10. A coated resin sheet according to claim 9, wherein the release layer comprises at least one member selected from the group consisting of an ether-series hydrophilic polymer having at least an oxyethylene unit, and a silicone oil.

10           11. A coated resin sheet according to claim 9, wherein the release layer comprises an ether-series hydrophilic polymer having at least an oxyethylene unit, and a silicone oil.

15           12. A coated resin sheet according to claim 11, wherein the proportion of the ether-series hydrophilic polymer is 10 to 500 parts by weight relative to 100 parts by weight of the silicone oil.

13. A coated resin sheet according to claim 8, wherein the resin sheet is a styrenic resin sheet.

20           14. A process for producing a coated resin sheet, which comprises applying a surface-treating agent recited in claim 1 on at least one side of a resin sheet.

15           15. A process according to claim 14, which comprises applying the resin sheet with a surface-treating agent recited in claim 1, and rolling up the coated sheet in a roll form.

16. A tray formed with a coated resin sheet

recited in claim 5.
